### Image Dimensions question

By [Mohamed Khaled](#)  
May 11, 2015

Object Oriented Programming

If the uploaded file is an image, you should check it's pixels, it's a fake image. And also, if you don't want to hold the max width and height.

```
$dimensions = array ("width" => 2000, "height" => 2000);
I will declare a separate function to return the image
```

```
//5. If the file is image, then check it's size.
if(array_search ($mime, $allowedMIME) < 3){
    $imageSize = ImageSize();
    if($imageSize["width"] < 4 || $imageSize["height"] < 4)
        throw new Exception("This image is too small or cor
    }
    if($imageSize["width"] > $dimensions["width"] || $in
}
}
function ImageSize(){
    $finfo = finfo_open(FILEINFO_MIME_TYPE);
    $mime = finfo_get_mime_type($file);
    $imageSize = array();
    if($mime == "image/jpeg" || $mime == "image/png" || $mime == "image/gif")
        $imageSize["width"] = imagesx($file);
        $imageSize["height"] = imagesy($file);
    else
        $imageSize["width"] = 0;
        $imageSize["height"] = 0;
    return $imageSize;
}
```

#### Comments

[Eslam Mohamed](#) May 14, 2015  
This is an interesting post, Thanks

[Islam Mourad](#) May 14, 2015  
How did you manage to get the first variable?

[Islam Mourad](#) May 14, 2015  
Can you please elaborate more?

[Mohamed Khaled](#) May 11, 2015  
Yes this is true!
